INTELLIGENT ASSET MANAGEMENT

## MANAGEMENT SOLUTIONS FOR UTILITY COMPANIES

### Meeting the Unique Needs of Utilities

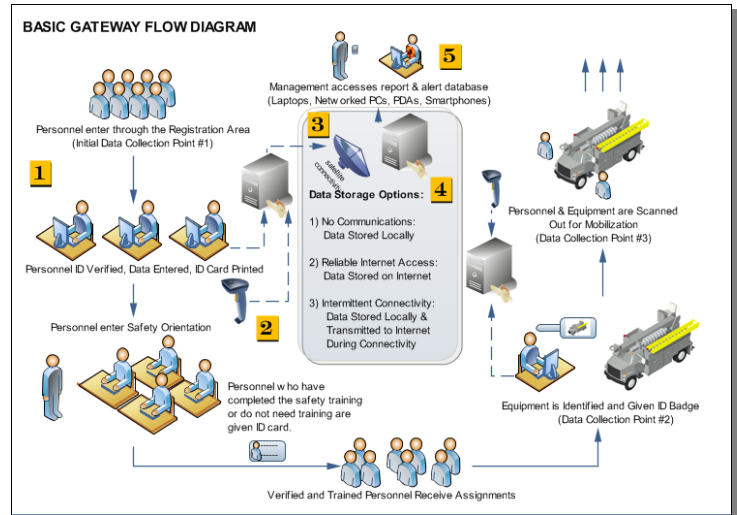

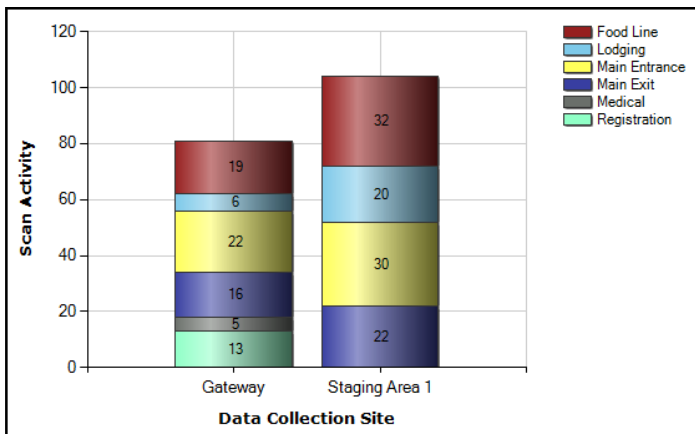

Utility companies face unique challenges when managing the effective use of assets during line maintenance & repair operations, especially during post-disaster recovery.

With the price tag of recovery operations skyrocketing, an effective asset management system is essential for maximizing efficiency, controlling costs and making informed in-event decisions.

TrackDown™ meets the needs of utility companies by providing asset management solutions that help assist day-to-day as well as post-disaster recovery operations.

TrackDown™ allows a company to manage fixed and mobile assets involved in operations, including: personnel, food, water, ice, lodging, heavy equipment, computer equipment, and more.

The goal of TrackDown™ is to provide real-time information to command personnel in the field and in the office while making it easy to access and understand. TrackDown™ reporting shows trends and provides instant feedback to management, making them more effective and empowered.

### TrackDown™ Features

With TrackDown™ the days of not knowing what is happening in the field are over. Say “goodbye” to the headache and indecision involved with managing an event without effective data. With TrackDown™ your company will reduce recovery costs from 10%-50% by keeping vendors accurate, using assets efficiently and increasing manager efficacy.

#### Key Features:

- TrackDown™ Client captures barcode data
- Transmits data real-time to TrackDown™ Server
- TrackDown™ Server data repository
- Interactive reports allow user to drill into data
- Customized dashboards for different user roles
- Alerts/Notifications sent via email/text message
- Data available 24/7/365
